DETAILED ACTION

This application is a National stage filing of PCT/CA98/00792, filed August 21, 1998.

Applicants' amendment filed June 1, 2004, has been received and entered. The substitute declaration has been received. The replacement drawing has been received. The specification has been received. Claims 1-19, 21, 27 and 28 have been canceled. Claims 20, 22, and 29 have been amended. Claims 20, 22-26 and 29-32 are pending and currently under examination.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The amendment to the claims has obviated the basis of rejections. As noted previously, at the time of filing the mechanism of delivery of the endogenously produced antibody was not known, and because the shared homology between chicken IgY and human IgG antibodies is low, there was no expectation that heterologous human antibody produced in or provided from somatic cells would be effectively delivered to the egg of a chicken. Further, at the time of filing it was known that endogenously produced chicken antibodies could be delivered to the egg of an egg-laying chicken, however while the prior teaches that proteins can be produced in chickens, the means of targeting the protein to the egg was by virtue of expression in the oviduct of the chicken where the egg is formed (see for example WO 94/20608), not in cells present in the general circulation such as lymphoid cells as reduced to practice in the instant disclosure.
